Rev.A

Features

- Ultra High Efficiency (Up to 94.5%)
- Full Power at Wide Output Current Range (Constant Power)
- Adjustable Output Current (AOC) with Programmability
- Isolated 0-10V/10V PWM/Resistor/3-Timer-Modes Dimmable
- Dim-to-Off
- Maximum Dimming Level with 9V or 10V Selectable
- Fade-Time Adjustable
- Always-on Auxiliary Power: 12Vdc, 250mA
- Output Lumen Compensation
- End-of-Life Indicator
- Input Surge Protection: DM 6kV, CM 6kV
- All-Around Protection: OVP, SCP, OTP
- IP65 and UL Dry/Damp Location
- TYPE HL, for use in a Class I, Division 2 Hazardous (Classified) Location
- 5 Years Warranty

Description

The SSM-220SxxxMF series is a 220W, constant-current, programmable and IP65 rated LED driver that operates from 249-528Vac input with excellent power factor. Created for many lighting applications including Horticulture, High bay, etc. The high efficiency of this driver enables it to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, output over voltage, short circuit, and over temperature.

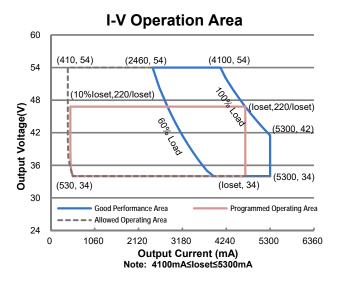

Models

| Adjustable Output | Full-Power Current | Default Output | Input Voltage | Output Voltage | Max. | Typical Efficiency | Dower | ical Factor | Model Number |
|----------------------|-----------------------|-------------------|----------------------------|-------------------|-------|-----------------------|-------|----------------|---------------|
| Current Range | Range(1) | Current | Range(2) | Range | Power | | | 480Vac | (4) |
| 410-5300mA | 4100-5300mA | 4100mA | 249~528Vac/ 352~500 Vdc | 34-54 Vdc | 220 W | 94.5% | 0.99 | 0.96 | SSM-220S530MF |

Notes: (1) Output current range with constant power at 220W

- (2) Certified input voltage range: 277-480Vac;
- (3) Measured at 100% load and 480Vac input (see below "General Specifications" for details).
- (4) SELV output.

Protection Functions

| Parameter | Notes |
|-----------------------------|--|
| Over Voltage Protection | Limits output voltage at no load and in case the normal voltage limit fails. |
| Short Circuit Protection | Auto Recovery. No damage will occur when any output is short circuited. The output shall return to normal when the fault condition is removed. |
| Over Temperature Protection | Decreases output current, returning to normal after over temperature is removed. |

Dimming

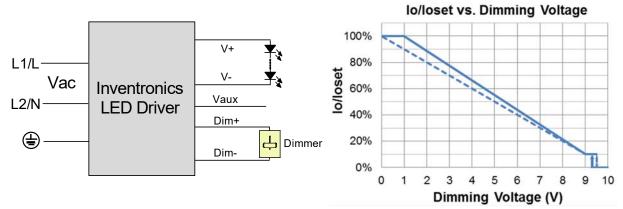

0-10V Dimming

The recommended implementation of the dimming control is provided below.

Implementation 1: Positive logic

Rev.A

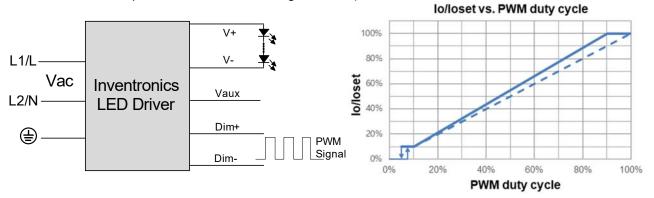

Implementation 2: Negative logic

Notes:

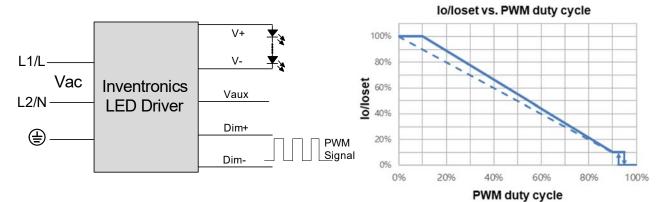

- 1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
- 2. The dimmer can also be replaced by an active 0-10V voltage source signal or passive components like zener.
- 3. When 0-10V negative logic dimming mode and Dim+ is open, the driver will dim to off and be standby.

10V PWM Dimming

The recommended implementation of the dimming control is provided below.

Implementation 3: Positive logic

Implementation 4: Negative logic

8/11

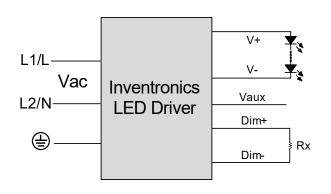

Rev.A

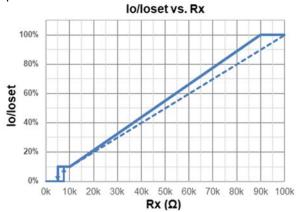

Notes:

- 1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
- 2. When 10V PWM negative logic dimming mode and Dim+ is open, the driver will dim to off and be standby.

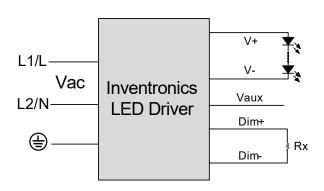

Resistor Dimming

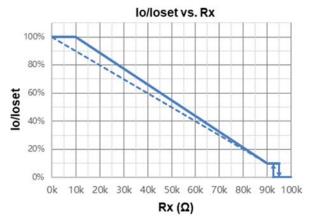

The recommended implementation of the dimming control is provided below.

Implementation 5: Positive logic

Implementation 6: Negative logic

Notes:

- 1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
- 2. When resistor negative logic dimming mode and Dim+ is open, the driver will dim to off and be standby.

Time Dimming

Time dimming control includes 3 kinds of modes, they are Self Adapting-Midnight, Self Adapting-Percentage and Traditional Timer.

- Self Adapting-Midnight: Automatically adjusts the dimming curve based on the on-time of past two
 days (if difference <15 minutes), assuming that the center point of the dimming curve is midnight local
 time.
- **Self Adapting-Percentage**: Automatically adjusts the on-time of each step by a constant percentage = (actual on-time for the past 2 days if difference <15 min) / (programmed on-time from the dimming curve).
- Traditional Timer: Follows the programmed timing curve after power on with no changes.

Output Lumen Compensation

Output Lumen Compensation (OLC) may be used to maintain constant light output over the life of the LEDs by driving them at a reduced current when new, then gradually increasing the drive current over time to counteract LED lumen degradation.

9/11

Specifications are subject to changes without notice.

All specifications are typical at 25 ℃ unless otherwise stated.

Rev.A

Maximum Dimming Level with 9V or 10V Selectable

The maximum dimming level can be set as corresponding dimming voltage is 9V or 10V by Inventronics Multi Programmer,9V is default.

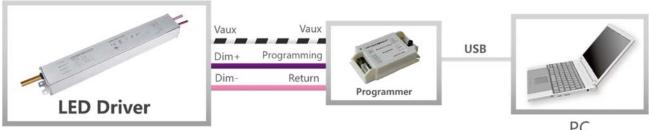

Fade Time Adjustable

Soft-start time and dimming slope can be adjusted by Inventronics Multi Programmer to get customized fade time experience, disable mode is default.

End Of Life

End-of-Life (EOL) is providing a visual notification to a user that the LED module has reached the end of manufacturer-specified life and that the replacement is recommended. Once active, an indication is given at each power-up of the driver, which the driver indicates this through a lower light output during the first 1 minute before normal operation is continued.

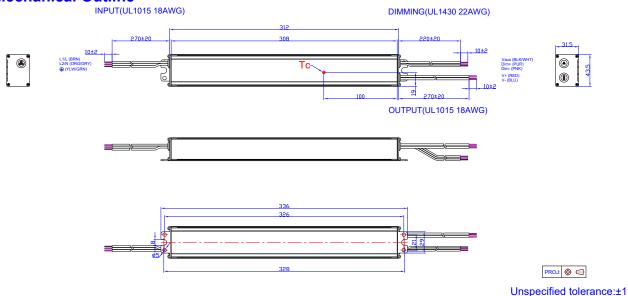

Programming Connection Diagram

Note: The driver does not need to be powered on during the programming process.

Please refer to <u>PRG-MUL2</u> (Programmer) datasheet for details.

Mechanical Outline

RoHS Compliance

Our products comply with reference to RoHS Directive (EU) 2015/863 amending 2011/65/EU, calling for the elimination of lead and other hazardous substances from electronic products.
