INVENTRONICS

Features

- Ultra High Efficiency (Up to 94.5%)
- Full Power at Wide Output Current Range (Constant Power)
- Adjustable Output Current (AOC) with Programmability
- Isolated 0-10V/10V PWM/Resistor/3-Timer-Modes Dimmable
- Dim-to-Off with Standby Power ≤0.5W
- Maximum Dimming Level with 9V or 10V Selectable
- Fade-Time Adjustable
- Always-on Auxiliary Power: 12Vdc, 250mA
- Output Lumen Compensation
- End-of-Life Indicator
- Input Surge Protection: DM 6kV, CM 6kV
- All-Around Protection: OVP, SCP, OTP
- IP65 and UL Dry/Damp Location
- TYPE HL, for use in a Class I, Division 2 hazardous (Classified) location
- 5 Years Warranty

Description

The *SUM-440SxxxMF* series is a 440W, constant-current, programmable and IP65 rated LED driver that operates from 90-305Vac input with excellent power factor. Created for many lighting applications including Horticulture, High bay, etc. The high efficiency of this driver enables it to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, output over voltage, short circuit, and over temperature.

| Parameter	Notes
Over Voltage Protection	Limits output voltage at no load and in case the normal voltage limit fails.
Short Circuit Protection	Auto Recovery. No damage will occur when any output is short circuited. The output shall return to normal when the fault condition is removed.
Over Temperature Protection	Decreases output current , returning to normal after over temperature is removed.

Dimming

● **0-10V Dimming**

The recommended implementation of the dimming control is provided below.

Specifications are subject to changes without notice.   *All specifications are typical at 25℃ unless otherwise stated.*

**Implementation 1**: **Positive logic**
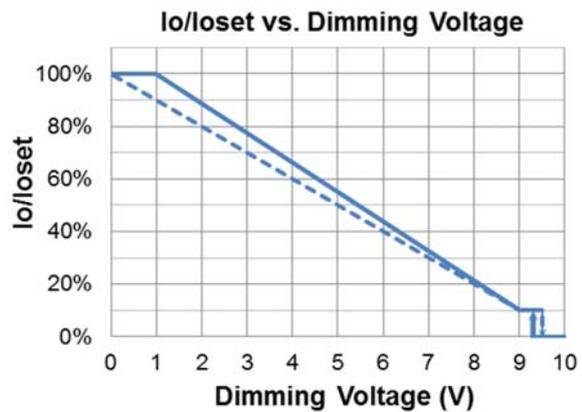

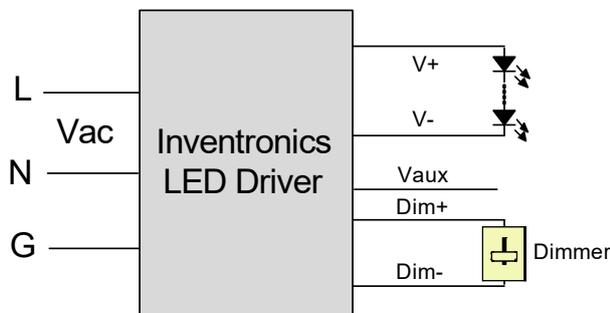

Implementation 2: **Negative logic**

Notes:
1. Do NOT connect Dim− to the output V− or V+, otherwise the driver will not work properly.
2. The dimmer can also be replaced by an active 0-10V voltage source signal or passive components like zener.
3. When 0-10V negative logic dimming mode and Dim+ is open, the driver will dim to off and be standby.

● **10V PWM Dimming**

The recommended implementation of the dimming control is provided below.
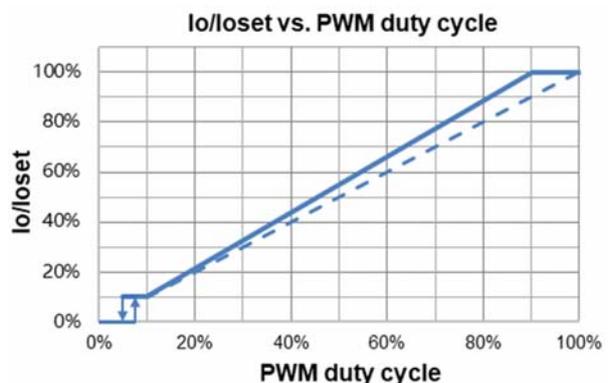

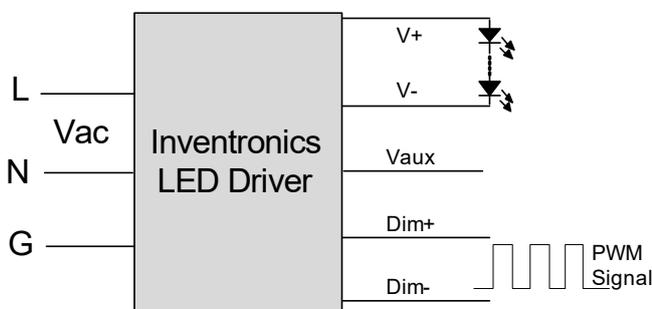

Implementation 3: **Positive logic**

Specifications are subject to changes without notice.   *All specifications are typical at 25℃ unless otherwise stated.*

Implementation 4: **Negative logic**

**Notes:**
1. Do NOT connect Dim− to the output V− or V+, otherwise the driver will not work properly.
2. When 10V PWM negative logic dimming mode and Dim+ is open, the driver will dim to off and be standby.

● **Resistor Dimming**
The recommended implementation of the dimming control is provided below.
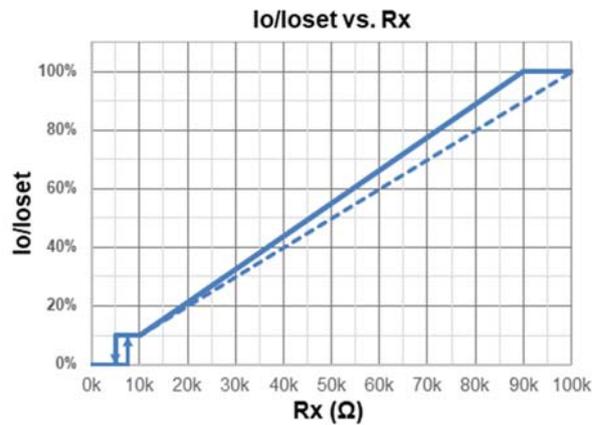

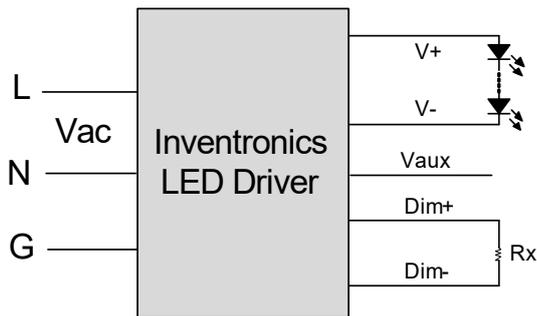

Implementation 5: **Positive logic**
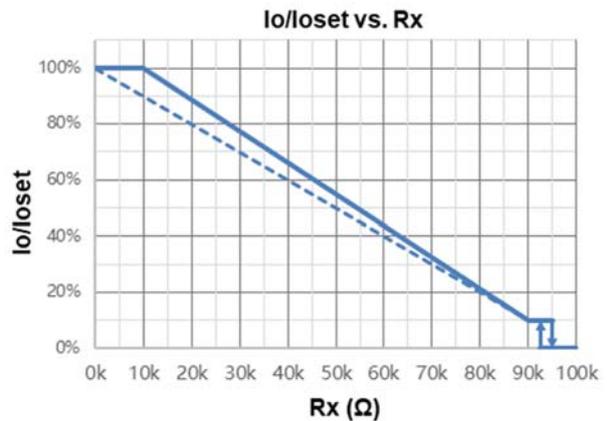

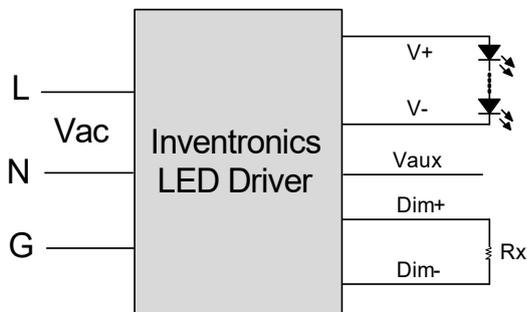

Implementation 6: **Negative logic**

Specifications are subject to changes without notice.　　　　　*All specifications are typical at 25℃ unless otherwise stated.*

www.inventronics-co.com　　　　**Tel: 86-571-56565800**　　　　Fax: 86-571-86601139　　　　sales@inventronics-co.com

Notes:
1. Do NOT connect Dim− to the output V− or V+, otherwise the driver will not work properly.
2. When resistor negative logic dimming mode and Dim+ is open, the driver will dim to off and be standby.

● **Time Dimming**
Time dimming control includes 3 kinds of modes, they are Self Adapting-Midnight, Self Adapting-Percentage and Traditional Timer.
- **Self Adapting-Midnight**: Automatically adjusts the dimming curve based on the on-time of past two days (if difference <15 minutes), assuming that the center point of the dimming curve is midnight local time.
- **Self Adapting-Percentage**: Automatically adjusts the on-time of each step by a constant percentage = (actual on-time for the past 2 days if difference <15 min) / (programmed on-time from the dimming curve).
- **Traditional Timer**: Follows the programmed timing curve after power on with no changes.

● **Output lumen Compensation**
Output lumen Compensation (OLC) may be used to maintain constant light output over the life of the LEDs by driving them at a reduced current when new, then gradually increasing the drive current over time to counteract LED lumen degradation.

● **Maximum Dimming Level with 9V or 10V Selectable**
The maximum dimming level can be set as corresponding dimming voltage is 9V or 10V by Inventronics Multi Programmer,9V is default.

● **Fade Time Adjustable**
Soft-start time and dimming slope can be adjusted by Inventronics Multi Programmer to get customized fade time experience, disable mode is default.

● **End Of Life**
End-of-Life (EOL) is providing a visual notification to a user that the LED module has reached the end of manufacturer-specified life and that the replacement is recommended. Once active, an indication is given at each power-up of the driver, which the driver indicates this through a lower light output during the first 1 minute before normal operation is continued.

Programming Connection Diagram
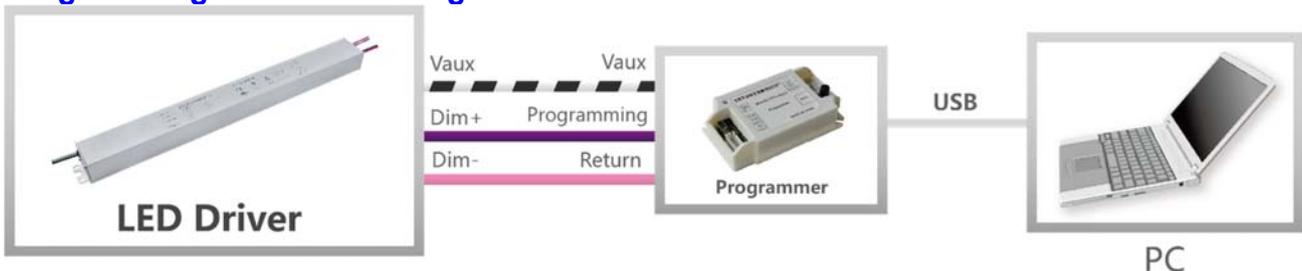

Note: The driver does not need to be powered on during the programming process.

● **Please refer to PRG-MUL2 (Programmer) datasheet for details.**
